SUMMARY

AI/ML engineer with 7+ years of experience building computer vision and machine learning systems, from real-time pose tracking on low-power edge devices to the data pipelines, MLOps tooling, and full-stack web apps around them. Hands-on with Python, TensorFlow, OpenCV, YOLO, React, Next.js, AWS, and Google Cloud, and currently doing LLM training and evaluation work.

SKILLS

Languages: Python, TypeScript, JavaScript, Java, C#, SQL

Machine learning: TensorFlow, scikit-learn, OpenCV, YOLO, Deep learning, Computer vision, Object detection, Pose estimation, On-device ML, ML pipelines, MLOps

LLMs & NLP: LLM integration, LLM evaluation, Prompt engineering, Natural language processing (NLP)

Web development: React, Next.js, Node.js, Flask, Tailwind CSS, REST APIs

Cloud & DevOps: AWS, Google Cloud (GCP), Kubernetes, Docker, CI/CD, Git

Data: NoSQL, ETL pipelines, Data analytics, Data visualization

EXPERIENCE

Prompt Engineer | Outlier & DataAnnotation

Mar 2025 - Present

Remote, Contract

- Write and refine prompts for large language models (LLMs) across classification, summarization, code generation, and multi-step reasoning tasks.
- Score and compare model responses against detailed rubrics, flag hallucinations, and help improve the quality of LLM training data.

AI/ML Engineer | Nex

Dec 2022 - Mar 2025

Remote, Contract

Worked on the real-time body tracking inside Nex Playground, a camera-based game console you control by moving.

- Built and optimized lightweight computer vision models for real-time pose and gesture tracking on low-power ARM devices, with all inference running on-device instead of in the cloud.
- Wrote low-latency code for camera input, sensor fusion, and model inference, and connected it to the SDK our game designers and outside Unity developers used to build motion-controlled games.
- Set up data pipelines and MLOps tooling to train, evaluate, and deploy models, plus debugging tools to check tracking accuracy across different lighting and room setups.

Freelance Software Developer | Upwork

Jun 2021 - Nov 2022

Remote

- Completed 20+ full-stack and AI integration projects while keeping a 5-star client rating.
- Built and shipped web apps with React, Next.js, Flask, and Python on AWS and Google Cloud for SaaS, e-commerce, and analytics clients.
- Added LLM features and third-party API integrations to client products, and automated manual workflows along the way.

Full-Stack Developer | Customized Limited

Sep 2019 - Nov 2022

Remote, Part-time

- Built, tested, and deployed front-end and back-end features for the company's platform using Java, Python, and Node.js.
- Used Python to connect the platform to the company's computer vision and machine learning models.
- Worked with full-time engineers and ML interns who processed and labeled the video data behind those models.

- Built features for an influencer marketing platform, using PHP and Laravel on the back end and JavaScript and React on the front end.
- Added tracking charts to influencer profiles and built dashboards that showed brand clients the ROI of their campaigns.
- Took features from design through testing and release, fixed bugs, and met my own milestones and delivery deadlines.

PROJECTS

Shark Detection from Drone Footage | Python, TensorFlow, OpenCV, YOLO, Drone SDK

Spots and tracks sharks in drone video in real time, using a YOLO object detection model and OpenCV.

Instagram Photo Protection | Python, TensorFlow, OpenCV, Instagram API

Uses image recognition and watermarking to catch and prevent unauthorized use of photos posted on Instagram.

GitHub Scraping & Analytics Tool | Python, CustomTkinter, GitHub API

Desktop app that collects GitHub data through scraping and the GitHub API, then shows it in live, interactive dashboards.

SaaS Landing Page | Next.js, React, Tailwind CSS, Resend

trashlion.com

A fast, responsive landing page for a SaaS product, with email integration through Resend.

EDUCATION

Bachelor of Computer Science | City University of Hong Kong, Hong Kong

May 2016 - Jan 2020

Graduated with honors, focusing on software development and AI. Thesis: AI-driven web applications. Member of the Computer Science Club.

CERTIFICATIONS

Certified AI/ML Engineer, micro1

May 2026
